

# ATLASSIAN CROWD

Identity management simplified

Crowd is single sign-on and OpenID software that simplifies user management. With Crowd, administrators can centrally manage authentication and authorisation for as many users, web applications and directory servers as needed.

## What is single sign-on?

Single sign-on (SSO) enables users to authenticate (log in) once and gain access to multiple web applications, without being prompted to log in again at each of them.

## Who uses Crowd?

Crowd is used by customers in just about every industry. Customers include: Cisco Systems, Walt Disney Company, University of Michigan, BearingPoint, CustomWare, NFL Enterprises, Purdue University, Sony Computer Entertainment, Telenor Networks, Juniper Networks, CCAD, ClairMail, Atos Origin, iBanx B.V., Loftwork Inc., MyPublisher, Connexions, Calyon Corporate & Investment Bank, Tecnomen Corporation, Valtech Technologies, and many more.

## Did you know?

A flexible plugin architecture allows you to add new features to Crowd, connect to new applications, retrieve users from different repositories, and sign on to new systems. Details at [www.atlassian.com/crowd/plugins](http://www.atlassian.com/crowd/plugins)

### Plug & Play

LDAP Connectors make it easy to integrate and manage multiple LDAP servers

### Connect what you have

A rich Java and SOAP API allows connection to new and existing applications

### Cloud Connectors

Log in just once, then move seamlessly between behind-the-firewall applications

Crowd makes life easier for administrators and users alike. Crowd connects to Atlassian's JIRA, Bamboo, Confluence, Fisheye and Crucible, as well as to a number of other web applications, including Apache Subversion, Microsoft.NET and more! You can also import and migrate user data from legacy repositories by way of Crowd's importers. It's no problem to migrate data from multiple LDAP servers, including Microsoft Active Directory.

# Identity management simplified

Let's put it this way — we will never write our own custom login methods again to support single sign-on authentication. Crowd is so sophisticated and flexible; it's where the standard should be.

Randall Ward, Appfire Technologies

## System Requirements

JDK or JRE version 1.5+. Database: PostgreSQL, MySQL, MS SQL Server, etc. Firefox, IE, or Safari.

## About Atlassian

Atlassian is an innovative global software company. More than **15,000 customers** in **100 countries**, including 30 of the world's **top 50 corporations**.

Over 400+ free plugins built and supported by the Atlassian community

Our lustworthy products are designed to stand alone, however, their integration capabilities make them even more useful. Atlassian products include:

- JIRA**: Issue tracking
- FishEye**: Repository insight
- Crucible**: Code review
- Bamboo**: Continuous integration
- Clover**: Code coverage
- Confluence**: Enterprise wiki
- Crowd**: Single sign-on
- JIRA Studio**: Hosted development suite

## Pricing\*

Edition	Price (USD)
Team (25)	\$600
Workgroup (50)	\$1,100
Enterprise (500)	\$2,000
Unlimited	\$8,000

Academic licenses are available for 50% off the listed prices. Crowd is free to qualifying Open Source projects or Non-Profit & Charity organisations.

\* Prices subject to change.

### Single sign-on

Crowd provides you with an easy-to-use framework for single sign-on (SSO) and centralised authentication.

### Application Connectors

Hit the ground running with support for popular products like Apache and Subversion.

### Directory Connectors

Out-of-the-box directory connectors for popular LDAP servers like Microsoft Active Directory.

### Identity management

Managing users is easier when they are all in one place with Crowd's web based administration console.

### Subversion

Eliminate user management headaches associated with Subversion (svn) by using web based administration.

### Google Apps

Connect enterprise users to Google Apps using Crowd as your secure, trusted authentication provider.

### OpenID

Establish a business exchange between your organisation, your users and trusted external sites and applications.

### Importers

Quickly migrate your existing user infrastructure using Crowd's multi-faceted approach to data importing.
